Thanks Jenny. All - is this what we need to signal agreement with NY on agreeing to the SW shift?

I'm good if you all are.

Katherine:

NY seems comfortable with this characterization of the LA-WLA shift. Let me know if it works for you.

>>> <Molloy.Jennifer@epamail.epa.gov> 12/21/2010 9:43 AM >>> Angus: If the following is an accurate representation of our discussion then I'll run this by Katherine before we make it official. Let me know if I mischaracterized anything. I'm open to any edits you want to suggest. If you're comfortable with it I'll send it to Katherine, and then send you back the 'official' version. Thanks, Jenny

The shift of 50% of the urban load allocation to wasteload allocation is intended to reflect the additional post-construction stormwater regulations that NY has imposed on nearly all new and redevelopment state-wide via the general permit for stormwater discharges from construction activities. EPA considers this a very robust aspect of New York's stormwater program, contributing significantly to reasonable assurance. The 50% shift is a reasonable estimate that can be further refined during the Phase II portion of WIP development.
